

Executive report

Evidence-led findings. Transparent coverage.

RUN	037408c78db44255
NETWORK MODE	offline
STATE	COMPLETED_WITH_LIMITATIONS
CANDIDATE FINDINGS	5
GENERATED	2026-09-22T03:57:31.849778+00:00

Assessment boundaries

Findings require manual validation; no compliance certification or complete vulnerability detection.

Browser execution, state-changing active attacks, business-logic verification and authenticated role comparisons are not supported.

Dependency matching is limited by supplied snapshots and inventory coverage; missing data remains NOT TESTED.

Framework mappings are a reviewed subset of related evidence, not complete ASVS/NIST/ATT&CK control assessments.

Source rules are syntax/regex heuristics; external scanners require a working isolated execution profile.

AI usage

Enabled: False; provider: none; verification: not used

Coverage

dependencies - NOT TESTED

openapi - PARTIAL

Execution notes

dependency database: DATA_MISSING

Priority actions

Dynamic code execution requires review: Remove dynamic evaluation or strictly validate trusted input.

Shell subprocess requires review: Use an argument list with shell=False.

Potential hardcoded credential: Review whether the value is sensitive; rotate exposed credentials and use a secret store.

Debug mode enabled: Disable debug mode in production.

API operation has no declared security: Verify the intended authorization policy and document it.
